

TMS Maritime is a leading UK specialist in marine civil engineering, ancillary floating plant and diving services

Client: Padstow Harbour

Value: £65,000

Project: Padstow Harbour Slipway Wall Repair

Duration: 4 Weeks

TMS were approached by Padstow Harbour Commissioner with concerns that the wall adjacent to their main harbour slipway was in disrepair with spalling render and exposed reinforcement. This presented a hazard to the general public as it was the boarding facility for both the local ferry and other marine craft.

TMS were engaged to repair the damaged render and resultant voids before installing approximately 50m of protective cladding made from sheets of recycled plastic. The finished result was an enduring yet resilient surface which is also waterproof and low maintenance.

Damaged and hazardous wall prior to repair:

Wall - repaired and newly clad:

One year later:

A year down the line, the recycled plastic facing is still providing a robust protection from ferry impact, protecting the public from injury and promoting marine growth.
