

TMS Maritime is a leading UK specialist in marine civil engineering, ancillary floating plant and diving services

**Client: West Country River Trust**

**Duration: 2 Weeks**

**Project: Camelford Fish & Eel Pass**

**Requirement:**

TMS were awarded a contract by West Country River Trust, to produce a fish & eel pass up through Enfield Park Camelford, the fish pass is designed to allow fish & eels to spawn further up the river before making their way back out to sea. The uneven levels and rock of the river bed made the migration difficult for the fish to pass.

**Solution:**

TMS surveyed the river and there were three places that needed attention as the rocks were too high for the fish to pass. We used abrasive and mechanical equipment to cut the notches in to the river bed to create the steps this created a path for the water to naturally flow down stream allowing the fish to migrate.
